COLLAFILL

Collagen Dental Plug

COLLAFILL®
COLLAGEN DENTAL PLUG

Surgical Esthetics®

CollaFill® is a resorbable Type I collagen dental plug designed for use in extraction sockets and minor oral wounds. It provides hemostasis, stabilizes the wound site, and supports natural healing by acting as a scaffold for cell attachment.

PRODUCT FEATURES

- Type I collagen material, bio-compatible and resorbable.
- Easy-to-use cylindrical plug shape for extraction sockets.
- Promotes clot stabilization and tissue regeneration.
- Eliminates need for removal—naturally resorbed.
- Absorbs quickly and conforms to socket morphology.

INDICATIONS FOR USE

- Extraction socket management.
- Localized wound protection in oral surgery.
- As a scaffold for bone graft material.
- Stabilization of clot and hemostasis.
- Compress and use as a socket cap over particulate graft.

HANDLING / PRECAUTIONS

- Insert dry or slightly moistened into the socket.
- Can be secured with a suture if additional stability is needed.
- Contraindicated in patients with collagen sensitivity.
