COLLASHIELD EXTEND

Long Term Collagen Membrane

COLLASHIELD® EXTEND
LONG TERM COLLAGEN MEMBRANE

Surgical Esthetics®

CollaShield® Extend is a long-lasting resorbable porcine collagen membrane formulated for cases requiring extended barrier function. Its slower resorption profile makes it ideal for larger or more complex regenerative procedures.

PRODUCT FEATURES

- Extended barrier function compared to standard CollaShield®.
- Resorbs in 6–9 months.
- Maintains structural integrity for longer healing periods.
- Biocompatible and resorbable without secondary surgery.
- Flexible, easy to trim, and adaptable to different defect sizes.
- Supports angiogenesis and bone regeneration.
- Very high tensive strength. Can be tacked or sutured.

INDICATIONS FOR USE

- Large or complex GBR procedures requiring prolonged barrier function.
- Ridge augmentation and peri-implant defects.
- Horizontal and vertical bone regeneration.
- Sinus floor elevation procedures.

HANDLING / PRECAUTIONS

- Hydrate before placement to enhance pliability.
- Ensure full coverage of graft material with overlap beyond defect margins.
- Contraindicated in patients with collagen allergy.
