COLLASHIELD
Collagen Membrane

COLLASHIELD® COLLAGEN MEMBRANE | Surgical Esthetics®

CollaShield® is a resorbable Type I porcine collagen membrane designed to support guided bone regeneration (GBR) and guided tissue regeneration (GTR). It provides a protective barrier that prevents epithelial and connective tissue migration while promoting the natural healing process.

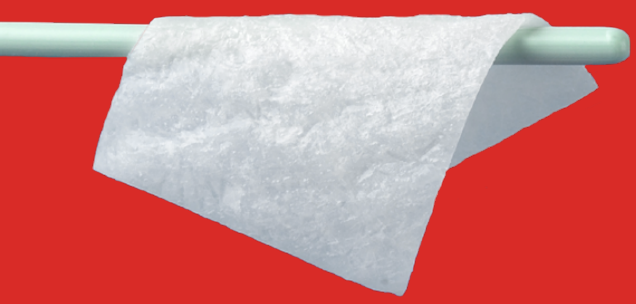

PASSIONATE ABOUT REGENERATION

PRODUCT FEATURES

- Type I collagen membrane, bio–compatible and resorbable.
- Provides effective barrier function for space maintenance. Resorbs in 60–90 days.
- High tensile strengtn can be tacked or sutured.
- Flexible and easy to handle; con–forms to defect morphology.
- Predictable resorption profile, eliminating need for removal.
- Supports cell attachment and tissue integration.

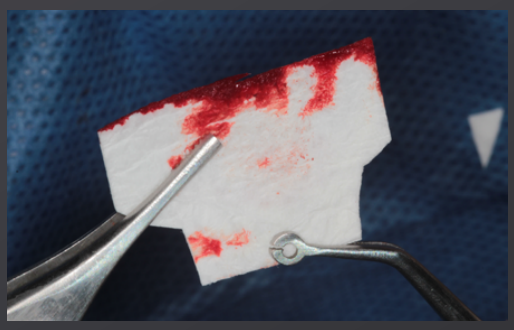

INDICATIONS FOR USE

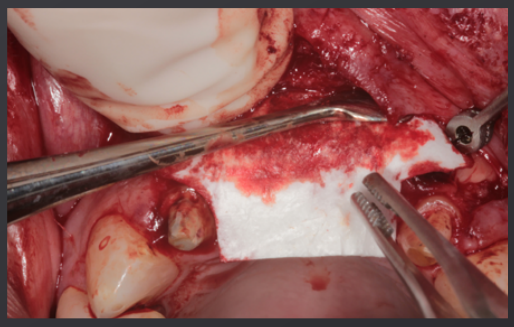

- Guided tissue regeneration in periodontal defects.
- Guided bone regeneration for ridge augmentation and preservation.
- Coverage of extraction sockets, sinus lifts, and implant sites.

HANDLING / PRECAUTIONS

- Hydrate in sterile saline before placement for improved flexibility.
- Place with dry instruments to prevent sticking.
- Avoid exposure to saliva during adaptation.
- Contraindicated in patients with known collagen hypersensitivity.
