GINGIDERM PLUS

Acellular Dermis

GINGIDERM® PLUS ACELLULAR DERMIS | Surgical Esthetics®

UNIQUE EXTRA THICKNESS

GingiDerm® PLUS is a thicker acellular dermal matrix graft (2.5–3mm) designed for cases requiring significant tissue volume and increased stability. It is especially useful for soft tissue augmentation in implant and esthetic dentistry.

PASSIONATE ABOUT REGENERATION

PRODUCT FEATURES

- Increased thickness for added volume and strength.
- Enhanced handling and suturing capability.
- Supports long-term tissue augmentation.
- Eliminates morbidity associated with autogenous graft harvest.
- Biocompatible scaffold for cell ingrowth and vascularization.

INDICATIONS FOR USE

- Soft tissue ridge augmentation.
- Peri-implant soft tissue thickening.
- Root coverage procedures requiring additional bulk.
- Advanced periodontal plastic surgery cases.
- Implant exposure to create thicker attached tissue.

HANDLING / PRECAUTIONS

- Hydrate thoroughly before placement.
- Can be sutured, pinned, or tacked for stabilization.
- Ensure adequate blood supply from recipient bed. Be sure graft is immobile.
- Contraindicated in patients with known sensitivity to allograft materials.
