OSSIFY LAMBONE
Flexible Bone Sheet

OSSIFY™ Lambone FLEXIBLE BONE SHEET | Surgical Esthetics®

OSSIFY® Lambone is a demineralized cortical allograft in thin sheet form used as a natural barrier for ridge augmentation and defect coverage; provides structural support while maintaining osteoconductive properties; resorbable.

PRODUCT FEATURES

- ✓ Thin, strong, and adaptable cortical bone sheet. Comes hydrated.
- ✓ Osteoconductive scaffold for new bone formation.
- ✓ Resorbable, no need for removal.
- ✓ Provides space maintenance for regenerative sites.
- ✓ Can be trimmed and shaped to fit defect morphology.
- ✓ Can be tacked, screwed or sutured.

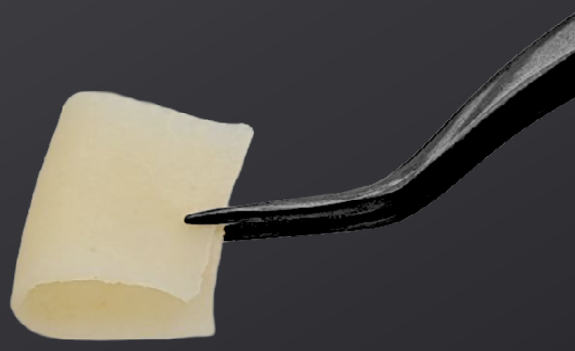

INDICATIONS FOR USE

- Ridge augmentation requiring space maintenance.
- Coverage of grafted sites.
- Vertical and horizontal bone regeneration.
- Sinus lift procedures.

CODE	SIZE
LBS15X20	15x20mm
LBS20X30	20x30mm

HANDLING / PRECAUTIONS

- Hydrate before contouring for flexibility Can be fixed with tacks or screws.
- Avoid fracturing during bending.
- Contraindicated in patients with allograft sensitivity.
