OSSIFY PUTTY

DBM Putty

OSSIFY DBM PUTTY | Surgical Esthetics

OSSIFY® DBM Putty is a moldable demineralized bone matrix allograft putty. It is designed to provide osteoinductive potential and excellent handling for bone grafting in periodontal and implant–related procedures.

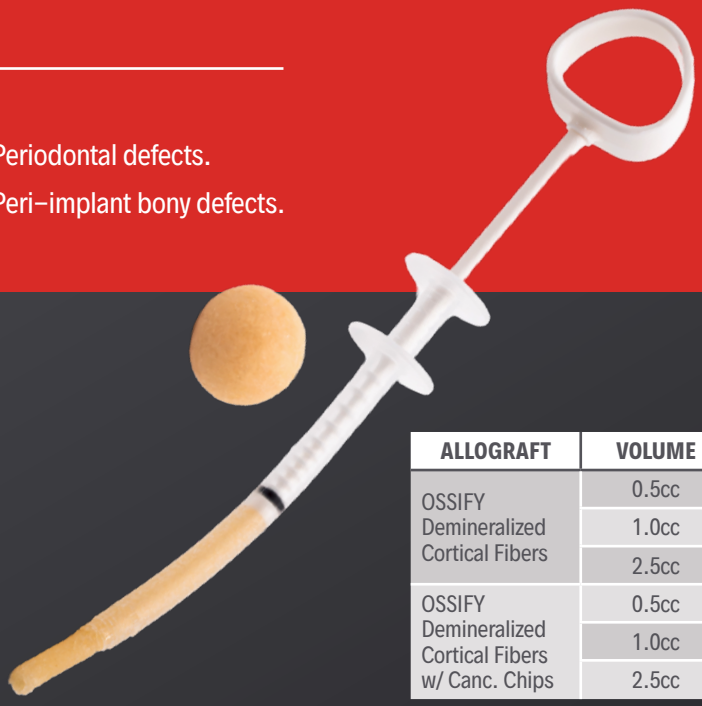

PRODUCT FEATURES

- ✓ 100% allograft content (no carriers).
- ✓ Moldable and easy to handle.
- ✓ Osteoinductive and osteoconductive.
- ✓ Maintains space and defect fill.
- ✓ Resorbs as new bone remodels.
- ✓ Comes with or without mineralize bone particulate.

INDICATIONS FOR USE

- Ridge preservation and augmentation.
- Sinus floor elevation.
- Periodontal defects.
- Peri–implant bony defects.

HANDLING / PRECAUTIONS

- Do not overpack to allow for vascular ingrowth.
- Cover with a membrane for stability.
- Contraindicated in patients with allograft sensitivity.
